

Bed Assembly Instructions

- Identify parts:

Head/Foot boards— 1 each.

Side Rails-2

Upper Guard Rails-2 (For Bunk Beds)

Mattress Support Slats—Quantity varies. For Bunk Beds, upper slats will be finished in color of bed)

Hardware Kit

Step 1: Arrange head and foot boards, (or bunk bed ends) so that the pre-drilled holes in the legs face each other.

Step 2: Using a battery operated drill, power drill, or a socket wrench with a 1/2" socket, start a lag screw into the bottom hole of each leg. **Do Not Insert All The Way.** For bunk beds, also start a lag screw into the bottom hole at the top where the guard rails will be installed. See Figure 1.

Step 3: Slide the lower hole of the side rail bracket onto the partially installed lag screw, making sure the slat support ledge is to the bottom. Once the lower side rails are on both sides, insert the other lag screw into the predrilled upper hole. **Do not tighten all the way.**

Step 4: Repeat Step 3 for bunk bed upper guard rails.

Step 5: Once side rails and guard rails are on, **tighten all lag screws.**

Step 6: Place mattress support slats on side rail support ledge, spacing evenly.

For upper bunks, place the finished/stained support slats with the finish facing downward.

NOTE: Two people recommended for bunk bed assembly.
